Experience

Web developer - Strandska Utvecklingshuset, Göteborg

My task was to continue devloping the website we built during our intership. However now i was the sole devloper. My other task was to implement a english version to the website.
And to make their content translatable. However my work also consisted of administrative duties for the website, such as handling the website database, updating text and images and also making the website responsive and improving it's design.

Internship - RaceOne, Göteborg

RaceOne is a GPS tracking app that streams the racers point of view live. My assignment at RaceOne was to take data from their backend API and create a page that displayed their race results on their website and also filtering and search capabilities for these races. I also got to implement a new design for their website mainly the results page.

Internship - Strandska Utvecklingshuset, Göteborg

Me and my classmate was tasked to create a new website for Strandska by creating a new custom wordpress theme. We had a design ready from a previous web desgin intern that we could use. At the time we both did not know PHP or Wordpress so it took us about a weekend to learn the language and the cms.

Education

Software Developer Java - Newton Yrkeshögskola Göteborg

At newton i studied primarly Java but i also learned about web development, databases and version control systems like git.
I learned project managment skills like agile methodlogy and scrum for project managment.
Another great thing about this education was that we had two internships periods where each period was 12 weeks.

Programming Skills

Javascript   PHP   Python

HTML5   CSS   Java

C++   ES6

Other Skills

Linux   Windows   Osx

React   Sass   Agile

Scrum   Apache2   nginx

Git / Version Control

Swedish   English
